THE REPORT
OF THE
PRESIDENT OF QUEEN'S COLLEGE, CORK,
FOR
THE ACADEMIC SESSION 1881-82.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY:—

I have the honour of submitting to Your Majesty the following Report on Queen's College, Cork, for the Academic Session 1881-82, in compliance with a provision of the Act of Parliament founding the Queen's Colleges (8 and 9 Vic., c. 6, s. 20), and in accordance with the College Statutes.

I regret that the chair of Natural History has been rendered vacant by the death of Professor A. Leith Adams, F.R.S., who died on the 23th of July. He took ill in the beginning of the session, and never afterwards lectured. During his illness his duties were performed by Mr. W. A. Fogerty, M.A., who did his work zealously and most efficiently, and to my entire satisfaction. Dr. Adams, though not long connected with the college, had endeared himself to all his colleagues; an enthusiastic naturalist, he took a deep interest in his special work, and in everything that could promote the welfare of the college.

At the entrance examination in October, and the two supplementary examinations 159 candidates presented themselves, of whom 128 passed and 31 were rejected; 5 students were admitted from other universities, making in all 133 new matriculated students; 21 also entered as non-matriculated students, the total number of new students was accordingly 154, as against 120 in the preceding session. The total number of students on the books of the college for the session was 402, of whom 374 were matriculated and 28 non-matriculated. In the preceding session the total number was 327, of whom 308 were matriculated and 19 non-matriculated. Queen's College, Cork, has thus as many students as several of the smaller German universities, and last session the number even exceeded one or two well known ones although it has no Faculty of Theology.

In the Appendix (A, p. 9), will be found the usual statistical information about the college—perhaps the fullest given for any university college in the world. Here I shall only refer to Table XI., p. 12, to note the progress of the college from its foundation to the present time. The college opened in 1849 with 115 students, of whom 62 were Roman Catholics, and 53 Protestants

of all denominations; last session—the thirty-third—it had 402 students, of whom 221 were Roman Catholics and 181 Protestants of all denominations. The total number of students has thus increased three and a half times, the increase in the number of Catholic and Protestant students respectively having been practically at the same rate. This growth would be considered satisfactory anywhere, but taking into account the condition of things in Ireland, the difficulties under which the college labours, and the numerous obstacles in its way, the progress made by Queen's College, Cork, may be justly described as remarkable.

At the commencements of the Queen's University, held in June and October, 1881, the number of degrees conferred on Cork students were:—

M.A.,	.	.	5		B.E.,	.	.	4
B.A.,	.	.	17		M.D.,	.	.	22
					M.Ch.,	.	.	19

In February of this year the Queen's University was dissolved, and its graduates made graduates of the Royal University of Ireland. From the preceding statement it will be seen that this serious change was made at a time when Queen's College, Cork (it is not for me to speak of the other Queen's Colleges), was thoroughly fulfilling the functions for which it had been founded, and when it was most successful in the number of its students and of its graduates. The effect of this change on the college cannot as yet be predicted, but on higher education I have no doubt it will be injurious.

The discipline of the college was well maintained during the session, and the conduct of the students on the whole good.

Considerable progress has been made in the building of a hall for the residence of students of the Church of Ireland. This hall, which its founder, Rev. G. Webster, D.D., has called Berkeley Hall, in honour of the illustrious philosopher, George Berkeley, Protestant Bishop of Cloyne, will be the first one founded under the provisions of the Colleges Act in connexion with any of the Queen's Colleges. Dr. Webster proposes to also use Berkeley Hall to give religious teaching to the students of his Church. I regret very much that he has had to suspend work through want of funds. As it is of the utmost importance that this attempt should be made to provide religious teaching for at least one denomination, according to the original provision in the Colleges Act, and as the sum required to complete and furnish the building is not large, I earnestly hope that it will be at once provided, so that the Hall may be opened next session.

I have again to call attention to the pressing want of accommodation in the library, and to the absolute necessity of putting doors to at least the lower book shelves.

The accommodation provided in the original College buildings has proved insufficient in every department, but nowhere is this more apparent than in the Chemical Laboratory. It was constructed for about thirty students, while last Session the number in the Practical Chemistry Class was eighty-nine. I

drew attention in my last Report to the great inconvenience caused by this state of things, and to the injurious effect it has on the teaching of so important a branch of instruction as Chemistry. Since then the class has considerably increased and consequently the inconvenience has become greater. The present state of this department is indeed very bad, and I therefore trust that the necessary funds for the erection of a new laboratory, for which application was made last year, will be provided next year. The space now occupied by the Chemical Laboratory, &c., will enable us to provide an Engineering Model Room and Technical Museum, which is much wanted, and to enlarge the Physical Laboratory.

Mr. Howard Grubb thinks he will be able to finish this autumn the instruments he has in hands for the Crawford Observatory, so that we shall be able, I hope, to complete the latter this year.

The Biological Laboratory will be fitted up this year, with the exception of the small aquarium attached to it, and for which I trust funds will be provided next year. The Laboratory has been used for practical work during the Session.

The Botanic Garden is in excellent order. Thanks to the generosity of Mr. W. H. Crawford and other friends, our glass houses contain a fine collection of plants for teaching purposes. We still want, however, accommodation for aquatic and succulent plants, and a propagating house without which it will be impossible to maintain our collections in their present state.

Large additions have been made to the Anatomical and Pathological Museum, which has been well arranged by the curator, Dr. Pearson.

Some valuable additions for teaching purposes have been made to the Natural History Museum. It would however, require the outlay of a considerable sum of money to make it what it should be.

The Geological and Mineralogical collections are also defective in many respects, and require a great many additions to keep them abreast of the present state of Mineralogical and Geological Science. When the cases, for which provision was made last year, shall have been fitted up, it is proposed to re-arrange this Museum.

In my last Report I dwelt upon the want of Assistants to the Professors in the experimental branches of Science, and of the necessity that exists of increasing the teaching staff in the Faculty of Medicine. I beg to refer again to those wants which become more pressing every day, on account of the change which has taken place in the mode of teaching the Physical Sciences, and the increase in the number of Students.

I beg to subscribe myself

Your Majesty's most dutiful servant,

WILLIAM K. SULLIVAN, *President.*
